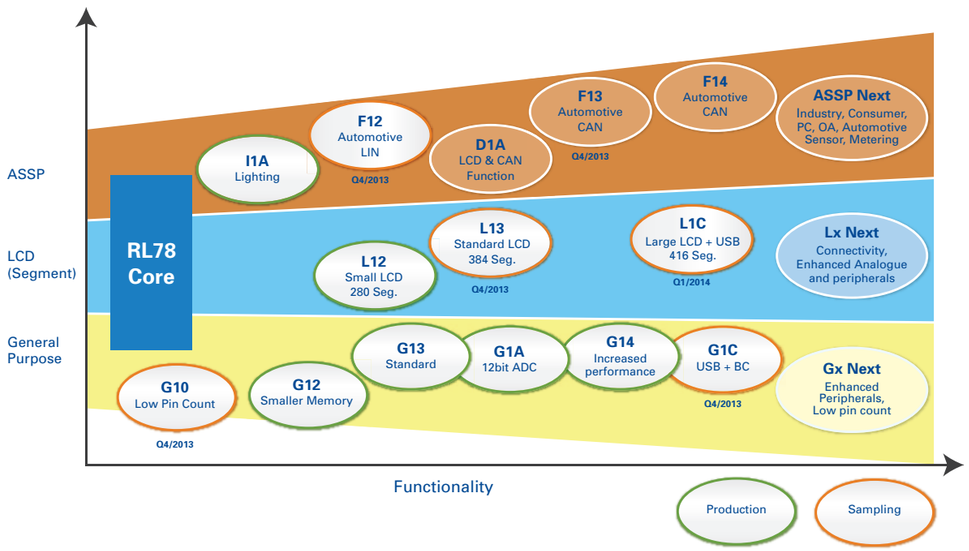
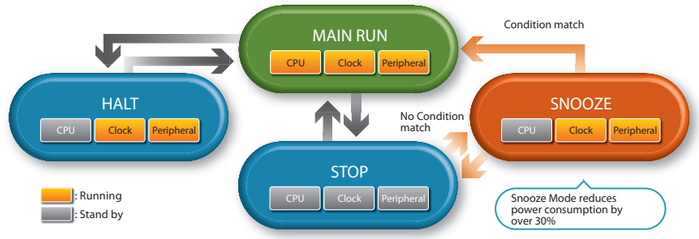
RL78 Roadmap



RL78 Low Power Modes

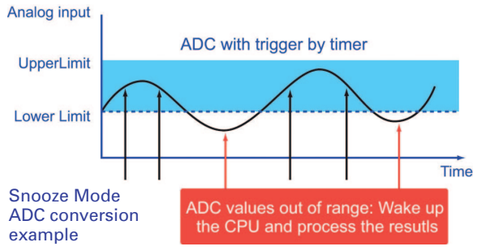
RL78 offers multiple power saving modes

- RL78's three low power modes maximise battery life, by offering flexible low power states to minimise CPU run time



Snooze Mode

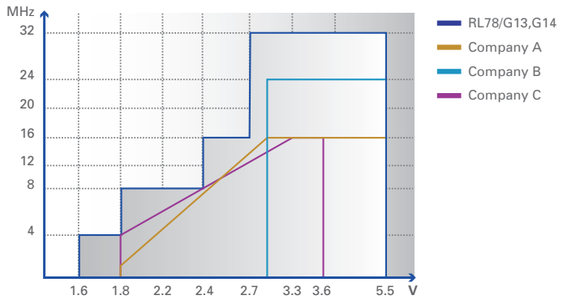
- No need to wake up CPU for receiving data
- The unique Snooze Mode allows some peripherals ie. ADC and UART operation whilst in standby modes
- Achieve 1/10th of the power consumption; Snooze mode uses 0.5mA vs. 5mA in Run mode (ADC)



Standby Modes

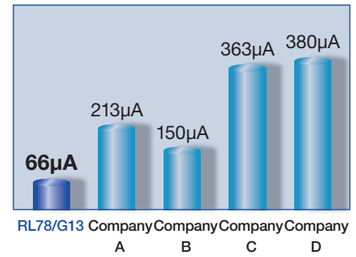
- Halt mode disables CPU operation saving as much as 80% of total MCU current, whilst allowing fast CPU enable time
- STOP mode achieves lowest power consumption by disabling more CPU functions

RL78 Wide Operating Voltage

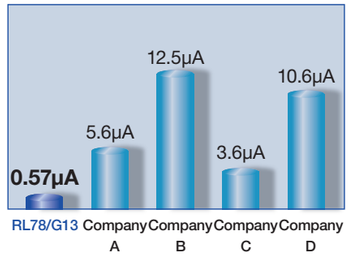


Power Consumption Values

Current consumed in Main Run mode (µA/MHz)



Current consumed in Halt mode (32.768 kHz, RTC + LVD)



Current consumed in Stop mode (WDT + LVD)

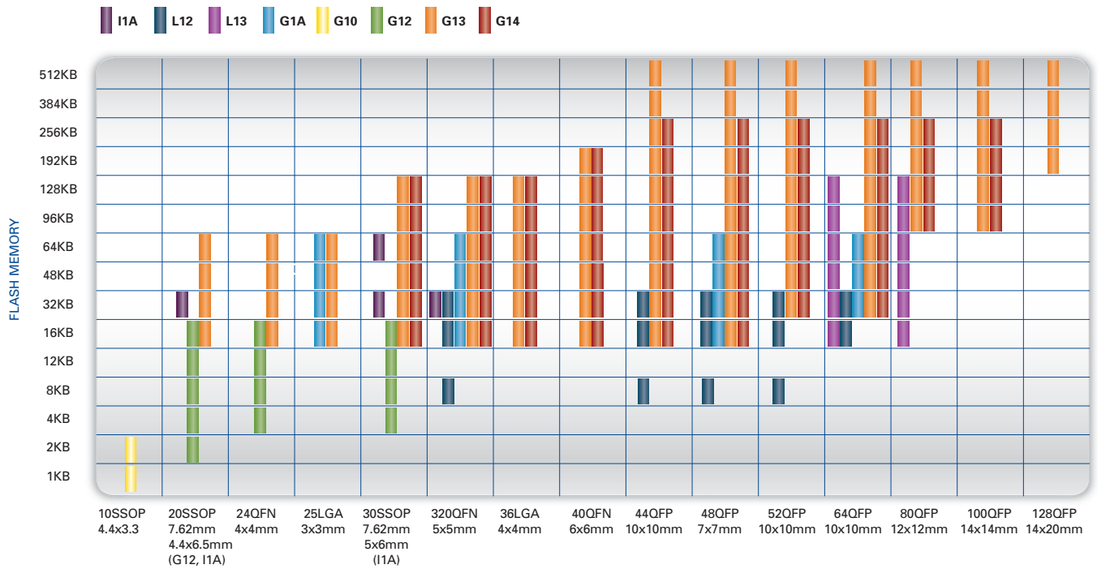
RL78 General Purpose (G Series) Lineup

Packages available down to 3x3mm



RL78 Reducing System Cost

High Accuracy On Chip Oscillator

- **+/-1% accuracy over temperature and voltage (-20 to 85 °C)**
- Two pre-set frequencies:
  24 MHz and 32MHz
  16MHz, 12MHz, 8MHz, 4MHz, 3MHz, 2MHz, 1MHz using divider

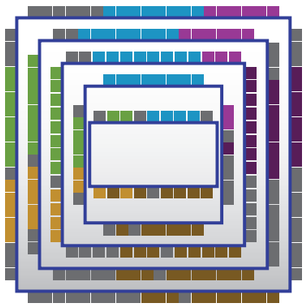
Compatibility

RL78 MCU's offer full pin compatibility

- I/O and peripheral pins scale up
- Easily add additional I/O and functionality by migrating to a larger pin count
- Keep peripheral pin PCB layout in the same order/position as pin count is increased
- Software code can be reused across the full RL78 family from 20 pins to 128 pins

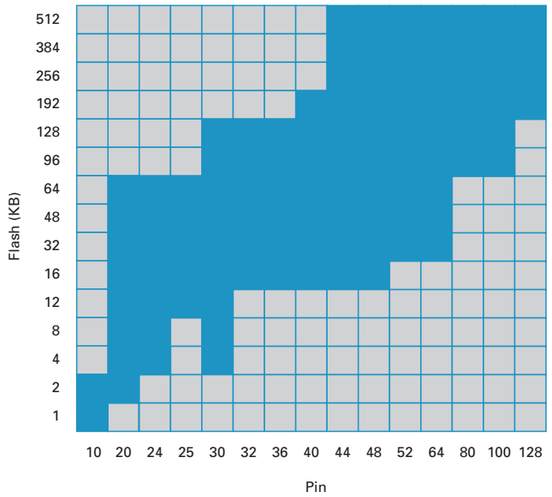


The colour coded pins of RL78/Gxx series opposite is an example of actual I/O port commonality from a 20pin SSOP up through 80pin QFP package version

Scalability

RL78 offers an unprecedented line up

- Over 300 devices
- Available in 10 to 128 pin packages & 1KB to 512KB Flash

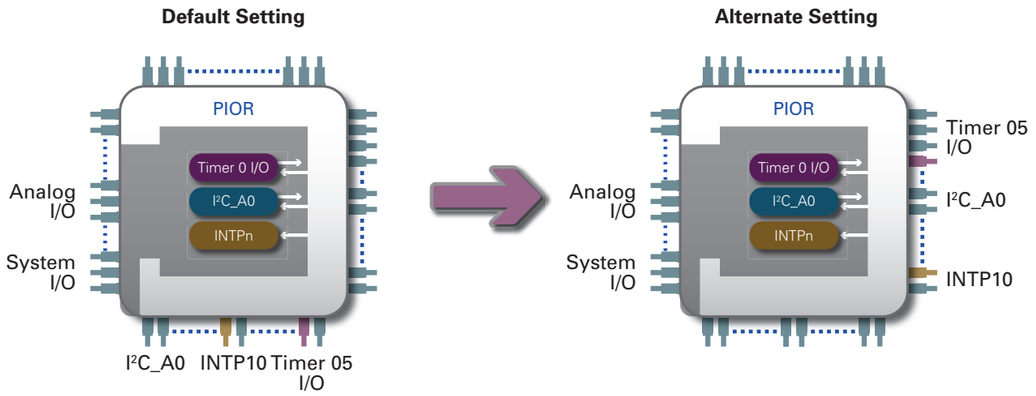


Flexibility

Peripheral I/O Re-direction (PIOR) capability remaps functions to alternate ports

- Due to layout or peripheral pin sharing constraint, there may be conflicts for existing peripheral I/O pin assignments
- Optimise peripheral pin functionality by easing function bottlenecks on a pin

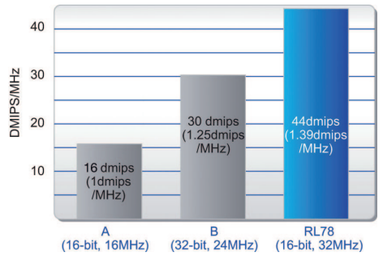
PIOR capability can help ease a bottleneck, as shown in this example by remapping to alternate pins



High Efficiency

RL78/G14 offers up to 44 DMIPS performance at 32MHz

- Unrivalled power consumption/performance ratio (1/3 that of competitors)
- Higher DMIPS rating and lower power consumption than a popular 32 bit competitor technology
- RL78 offers widest operating voltage in its class from1.6V to 5.5V
- 85% instructions executed in one clock cycle



Advanced Features

A dedicated library (approx. 8.1 KB) is required to use the data flash.

Note: The 20-pin to 32-pin product versions have no subsystem clock, so only the fixed-period interrupt function employing the low-speed on-chip oscillator clock (15 kHz) can be used.
